DETAILED ACTION

Claim Objections

1. Claims 2 and 3 are objected to because of the following informalities: In claims 2 and 3, there is no antecedent basis for "said status message command signal". Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-3 and 11-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Katsuyama et al (5,701,385).

Regarding claim 1, Katsuyama discloses a recording /reproducing apparatus(Fig. 23) comprising:

a transducer (reading head) for reproducing a digital stream video signal (column 22, lines 15-24) from a recording medium;

a replay electronic (38,39)) for processing a video signal to produce an output bit stream;

Art Unit: 2616

a decoder (42) for decoding the stream video signal;

a generator (OSD) for generating the status message of the operation mode of the recording/reproducing apparatus (column 3, lines 25-55, column 24, lines 53-58, column 25, ;lines 50-69, Figs. 31); and

a inserter (50) for inserting (superimposing) the status into the decoded the video signal (column 22, lines 15-24).

Applicants agree that Katsuyama does not teach status message . In response the examiner disagrees. It is noted that at figs. 29 and 31, Katsuyama teaches displaying messages DISC ERROR, NO DISC, PBC and double arrows indicating a fast forward operation mode .

Regarding claims 2 and 3, Katsuyama further teach that the status message indicting apparatus specific message or data (Fig. 31) .

Method claims 11-13 correspond to apparatus claim 1-3 . Therefore method claims 11-13 are rejected by the same reason as applied to apparatus claims 1-3.
